TAs Office Hours: by appointment

Course Pre-requisites: Basic courses on programming.

Course Description: DevOps is the latest paradigm on how to develop software. It combines lean and agile development methods with the latest suite of operation tools to enable fast, worry-free, and regular shipping of code into production. The focus of the course will be on the DevOps way of working, but we will also survey the wide range of DevOps tools and use some of them.

Course Objectives

1. Understand the DevOps way of organizing work.
2. Be familiar with the range of DevOps tools.
3. Understand how the tools support the way of work.
4. Become familiar with particular instances of several tools.

Course Structure

One lecture per week, and regular development work, reading, and videos.

Readings

Listed here:

<http://www.thedevopscourse.com>

Course requirements

Release work into production at least twice per week.

A rough grade breakdown, which might be adjusted as the semester proceeds:

Project: approx. 55% of grade. **Regular**, incremental releasing of software is the largest component of the student's grade. Please note that you are graded on the project quality overall, as well as your individual contribution to the project.

Class participation: 5% of the grade

Tests during the semester, approx. 20% of the grade

Final Exam, approx. 20% of the grade

Course Project

Throughout the semester, students will develop a project by applying the core principles and tools of DevOps. The project includes a series of checkpoints, approximately every week of the semester. At every checkpoint, the group of students will be required to demonstrate their progress which includes techniques learned in class. Please note that regular contributions to the project (2 - 3 times a week) are required to succeed in the course. The list of projects to choose from will be provided at the start of the semester.

Moses Center Statement of Disability

If you are student with a disability who is requesting accommodations, please contact New York University's Moses Center for Students with Disabilities (CSD) at 212-998-4980 or mosescsd@nyu.edu. You must be registered with CSD to receive accommodations. Information about the Moses Center can be found at www.nyu.edu/csd. The Moses Center is located at 726 Broadway on the 2nd floor.

NYU School of Engineering Policies and Procedures on Academic Misconduct

- A. Introduction: The School of Engineering encourages academic excellence in an environment that promotes honesty, integrity, and fairness, and students at the School of Engineering are expected to exhibit those qualities in their academic work. It is through the process of submitting their own work and receiving honest feedback on that work that students may progress academically. Any act of academic dishonesty is seen as an attack upon the School and will not be tolerated. Furthermore, those who breach the School's rules on academic integrity will be sanctioned under this Policy. Students are responsible for familiarizing themselves with the School's Policy on Academic Misconduct.
- B. Definition: Academic dishonesty may include misrepresentation, deception, dishonesty, or any act of falsification committed by a student to influence a grade or other academic evaluation. Academic dishonesty also includes intentionally damaging the academic work of others or assisting other students in acts of dishonesty. Common examples of academically dishonest behavior include, but are not limited to, the following:

1. Cheating: intentionally using or attempting to use unauthorized notes, books, electronic media, or electronic communications in an exam; talking with fellow students or looking at another person's work during an exam; submitting work prepared in advance for an in-class examination; having someone take an exam for you or taking an exam for someone else; violating other rules governing the administration of examinations.
2. Fabrication: including but not limited to, falsifying experimental data and/or citations.
3. Plagiarism: intentionally or knowingly representing the words or ideas of another as one's own in any academic exercise; failure to attribute direct quotations, paraphrases, or borrowed facts or information.
4. Unauthorized collaboration: working together on work that was meant to be done individually.
5. Duplicating work: presenting for grading the same work for more than one project or in more than one class, unless express and prior permission has been received from the course instructor(s) or research adviser involved.
6. Forgery: altering any academic document, including, but not limited to, academic records, admissions materials, or medical excuses.
